POS Management System: -

Is a system that supports automatic control in your project and not just address your sales and your inventory Moreover, it is the only system capable of controlling sales channels automatically and provides you with a report on the balance sheet and profit and loss statement at the end of the day. You can also evaluate the POS system in the management of your store.

Properties POS Management System: -

- Supports all the functionality that allows you to work quickly and efficiently
- Suspension of movement of sales and the transition to the following customer service and then returning to the pending motion for later
- It also provides an easy way to enter items and repetitive movements, without the need to re-read barcodes or enter a product number
- You can easily delete or repeat an item from items registered in a receipt. In addition to the recording of sales and returns
- The program allows recording of payment movements of sales by credit and cash payments (withdrawal) of Treasury
- Control the movement of sales within the place to determine the size and value of sales for any period.
- The speed of the process of direct sales
- The ability to deal with each individual vendor.
- Print a receipt with all data of the sales process (items and prices and the amount paid and who is in charge of the sales process and the time to complete the process)
- Avoid the error in the calculation of selling prices and addition and subtraction, etc. with ease of querying prices.
- Knowing the company's indebtedness to suppliers and making a separate statement of account for each supplier.
- Identify and inventory value at any moment and making a report of the speed of item circulation and determine the stagnant items.
- Determine the extent of demand for each item and the quantity required on a regular basis
- Expiration alert for items put up for sale
- Calculating direct and indirect Expenses.
- Calculating the profit and loss of the system
